

initiator and propylene oxide, having a number average molecular weight of from 400 to 6000 and a mean functionality of from 1.5 to 3;

C1 b12) from a positive amount to 20% by weight, based on the weight of the mixture (b1), of a second polyether polyalcohol, said second polyether polyalcohol comprising an amine functional initiator and propylene oxide, having a number average molecular weight of from 400 to 6000 and a mean functionality of from 1.5 to 3;

b13) from 0 to 35% by weight, based on the weight of the mixture (b1), of a third polyether polyalcohol having a number average molecular weight of from 150 to 7000 and a mean functionality of from 2.1 to 5;

b14) from a positive amount to 30% by weight, based on the weight of the mixture (b1), of a bifunctional chain extender; and, optionally,

c) catalysts and/or;

d) auxiliaries and/or additives;

wherein said chain extender, said first, said second and said third polyether polyalcohols are mutually exclusive of and structurally distinct from each other.

---

#### **REMARKS**

Claims 1-4 and 7-16 remain in the application with Claim 1 being independent. Claims 7-16 had been added by the previous amendment.

The Examiner had rejected Claims 1 and 2 under 35 USC § 112, first paragraph, because "Applicants have failed to specify if the molecular weights are weight average or number average or how they have been determined." Claim 1 has been amended to state that
